How do you create a pdf export?

# CLARITY

On the left you can see three versions of the Raspberry Pi. Each of them has a set of metal pins sticking out of the board at the top left of the picture.

That set of pins is called a Header.

The pins are used to send signals to and from the computer. Many of them can be used for almost anything and controlled by our programmes. So they are called General Purpose Input Output pins, or GPIO for short.
